Innovation Driven

Bringing More Possibilities

Professional Trading Platform

Gain market insights and business intelligence, execute trades, manage risks, build strategies and meet regulatory requirements.

Liquidity Management Platform

Optimize liquidity through a cloud-native management platform. Help you access global multi-asset trading markets and counterparties.

Direct Markets Access

Neutral and not bundled with LP. Gain direct access to 500+ trade counterparties and venue on 10,000+ products.

Proven Industry Expertise

Fortex stands for stability, focus and reliability. Each product and solution has been proven in the financial markets.

Global Clients

Empowering Their Success

Banks and Exchanges

Trade directly with other interbank members and counterparties. Match orders with our unique algorithms to find the best market liquidity. Distribute liquidity to market takers.

Brokers and Dealers

Access to banks and liquidity providers to aggregate liquidity. Get instant, low-cost STP orders with thin spreads and advanced risk management features.

Liquidity Providers

Source and aggregate liquidity from markets and distribute liquidity to other market takers. Provider market data and order execution service via Fortex. Effectively manage risks and offer multiple trading terminals and APIs.

Fund Managers

Gain better safety of funds via a managed and transparent trading workflow via Fortex. Trade with the best liquidity provider at your own choice. Execute complex strategies with Fortex.

EcoSystem of Trading Solutions

Think Bigger with Fortex

Many financial institutions have built their success over Fortex's ecosystem of trading solutions: trading platform, infrastructures, bridging and liquidity network.

Our innovations, expertise and focus are the reasons of our success, and also, your success.

Infrastructure as a Service

Reliable Server Hosting for Financial Institutions

Stability is Key

Infrastructure built for banks, exchanges and LPs to meet their most demanding need for stability and availability.

High Scalability and Flexibility

Scalable and flexible computing power to suit your changing needs without interruption to your service.

Carrier-class Security

High-performance firewalls, security protocols, and anti-DDoS protection to ensure maximum business stability and avoids service downtime.

Cross-connect

Cross connect to major venues and LPs in New York, London and Hong Kong for ultra low latency and high stability.

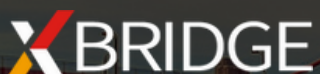

Premium Global Network

Server hosted at Equinix LD4, NY4, and HK1 with direct fiber optic connections in between to achieve a superior global network.

24x7 Specialists Support

Our premium support is always here, 24*7. You focus on your client and trading. We focus on you.

MT4/5 Bridge & Aggregation Engine

Gain Global Liquidity and Advanced Trading Capabilities to Multiple Trading Platforms

Multi-asset

Gain access to 500+ trading venues and 10,000+ products from exchanges and OTC markets, including stocks, futures, FX/CFD.

Fortex Trading Frontends

Execute trades directly onto platform or LPs. Professional trading with level 2 market data, advanced order and execution types, real-time monitor on liquidity, positions, margin, P&L and accounts.

Centralized Connectivity Engine

Low latency connectivity with 500+ liquidity providers and multiple trading platforms (MT4, MT5, Fortex, FIX API, and other platforms)

Distributing Liquidity

Distribute liquidity on your own terms to institutional and professional clients with margin or credit trading accounts, backoffice and Fortex trading frontends.

Pricing and Liquidity Management

Source and aggregate liquidity, construct liquidity pools, markups, spreads, execution models to tailor for different clients and scenarios.

Trade Copier

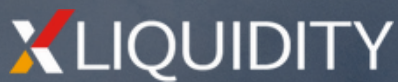

Flexible setting on copy trades on your C-book and LPs, and ability to give-up trades to external MT4/MT5 accounts.

Advanced Risk Management

Maximize profitability with advanced warehousing and STP features based on VWAP sweep, liquidity pool, customizable settings and execution controls.

Quant-based Hybrid Execution

Create algo-based hybrid execution based on quantitative risk assessment. Automatically STP trade flows with pre-set thresholds.
